

OVERVIEW

Fueled by the growth of cloud, mobile, and API access, identity security continues to be a major issue for organizations. According to Verizon¹, 81% of data breaches come from compromised credentials, frequently facilitated by theft or abuse of privileged accounts². Privileged accounts are users with access to high net value data and networks, such as software developers, IT personnel, and financial officers – all targets for bad actors and hackers. To protect against this threat today, data security leaders must deploy, integrate, and manage at least four point technologies. These disparate silos result in unnecessary expense and security gaps introduced by failed or partial deployments. OverWatchID™ enables organizations to secure identities, both standard and privileged, with a single, complete platform that secures identity both inside and outside your network.

ONE PLATFORM, COMPLETE COVERAGE

Built from the ground up, OverWatchID is an Identity Security Platform™ that uniquely combines and extends Privileged Access Management (PAM), Identity and Access Management (IAM), Cloud Access Security Broker (CASB) and Multi-Factor Authentication (MFA) technologies.

**Identity Security Synergy**

One of the most feature-rich, multi-tenant solutions available, OverWatchID delivers far stronger identity security than the sum of its parts. Next-gen credential management sets a new standard for security efficacy.

**Fast and Easy**

Leveraging orchestration and automated provisioning, deployment of OverWatchID takes days, not months.

**Cost Effective**

OverWatchID reduces subscription, deployment and administration costs by up to 80%.

OverWatchID helps organizations prevent data breaches with its holistic Identity Security Platform, sealing off the most vulnerable points of attack. By combining and extending key identity security technologies into a single solution, OverWatchID delivers a complete and cost-effective solution that's fast and easy to deploy and manage.

OverWatchID offers:

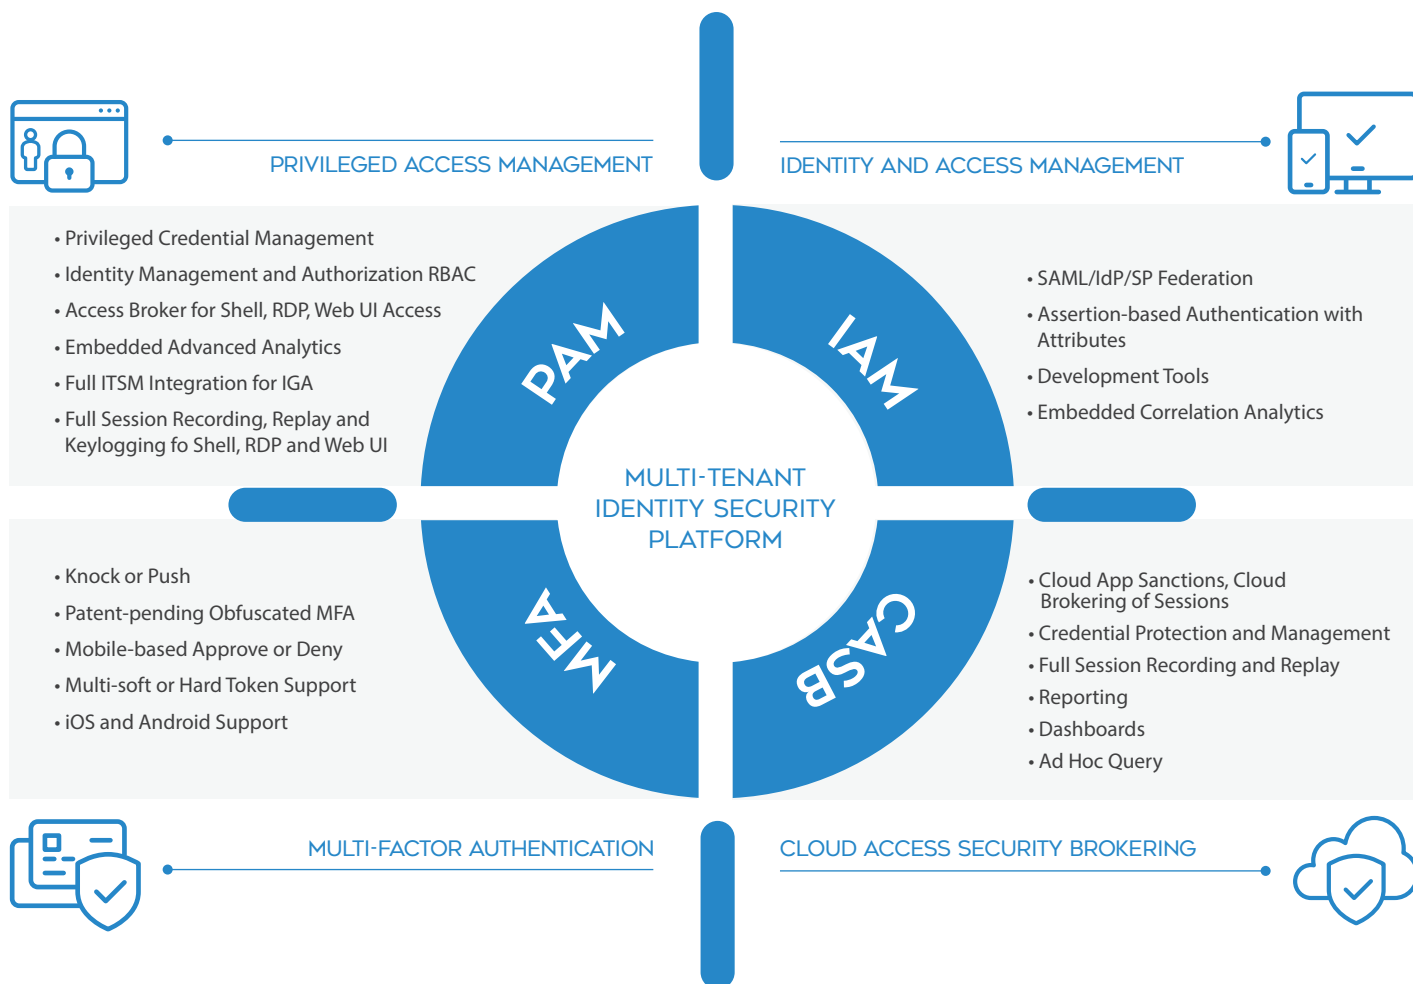

- One integrated, holistic identity security solution
- Unmatched efficacy and security
- Frictionless deployment in days, not months
- Savings up to 80%
- Innovative, agent-based solution with no hardware
- Standards-based single sign-on
- Centralized administration

IDENTITY SECURITY PLATFORM

The OverWatchID identity security platform uniquely combines and extends PAM, IAM, CASB, and MFA technologies, making it the most feature-rich solution available. With multiple strategic patents pending, OverWatchID solves the toughest technology challenges in identity security.

All organizations like low cost, high efficacy, rapid deployment and comprehensive, holistic features, but these benefits are especially important to:

- Distributed multi-site environments, where deploying hundreds or thousands of on-prem gateways simply isn't feasible
- Service provider environments, where multi-tenancy is required
- Sensitive data environments, where breach of customer/patient/financial data is simply unacceptable
- Cost-conscious environments, where IT resources and budgets are tight

Headquartered in Denver Colorado, the OverWatchID management team has built identity security solutions for the past twenty years for Fortune 500 customers such as Sony Pictures, BP, Boeing and IBM. For more information, please contact us at info@overwatchid.com
