Fishtech Group
SERVICE OFFERINGS

ADVISORY

Cloud

SaaS Discovery

- Create a baseline using a CASB tool to conduct discovery.
- Identify risky applications and recommend remediation steps.

Cloud Enablement

- Develop a cloud strategy that meets objectives and compliance mandates.
- Create the architecture to achieve operational efficiency and increased profit.

Cloud Sanctioning

- Develop an overall governance program to effectively operate a cloud-first model enterprise-wide.

Security

Security Operations Center

- Undergo a full operations assessment that includes people, process, and technology.
- Gain a roadmap, execution strategy, increased operational efficiencies, and a managed level of risk.

Security Architecture Review

- Improve overall enterprise risk posture.
- Develop and implement the processes, procedures, and architecture of a mature security stack that meets all business and compliance objectives.

Governance

Business Continuity Management

- Create the strategic and operational framework to continue business as usual.

Security Program Development

- Develop a mature information security program with well-documented processes that are actionable and measurable.

Framework Assessments

- Identify, categorize, and assess security program gaps, and then define remediation steps.

TECHNOLOGY

Technology Implementation

- Gain the expertise and time to effectively validate and implement technologies.
- Use our experts to deploy correctly in a compressed timeframe to meet your objectives.

Firewall Optimization

- Enhance your organization's security posture by enabling Next-Generation Firewall feature sets, streamlining architecture, and reviewing security policies.

Technology Architecture Review

- Improve your overall enterprise risk posture and ensure that the architecture is complete.
- Develop and implement the processes, procedures, and architecture in order to have a fully mature security stack that meets all business and compliance objectives.

Software-Defined Data Center

- Develop the correct network architecture that meets business objectives and provides automation and orchestration.

OPERATIONS

Managed Services

- Experience constant visibility and security threat response 365 daysa year, 24 hours a day.
- Focus on core business objectives not security management.

Incident Response

- Stop attacks in their tracks, identify how they have affected your business, mitigate future damage, and collect all relevant evidence.
- Implement procedures to thwart a breach, remove the source, and mitigate damage to your finances and reputation.

Penetration Testing

- Implement the most advanced security testing policies to avoid a true crisis.
- Use the same tools as hackers to pinpoint vulnerabilities and gain network access.
- Take steps to help you close those vulnerabilities and safeguard your business.
